Informacje o szkoleniu

This Using Oracle Enterprise Manager Cloud Control 13c training teaches you how to use Enterprise Manager Cloud Control to monitor and manage your enterprise-computing environment. You'll learn how to use the Cloud Control framework, the out-of-box capability to manage Oracle targets, individually or in groups with templates, monitor the compliance of targets, use the job system to automate commonly performed tasks, view and compare configurations and create and use predefined and customized reports. Benefits to You You'll walk away from this course with the ability to use the core functionality of Oracle Enterprise Manager Cloud Control 13.1. You will have also developed the knowledge and skills to use Cloud Control to manage an enterprise environment. This includes tasks like organizing targets into groups, setting up your administrators and their privileges, implementing monitoring of your targets, monitoring Systems and Services, using the Job System, viewing and comparing system configurations, managing compliance and producing reports with BI Publisher. Participate in Hands-On Exercises By engaging in hands-on practices to reinforce new knowledge, you will learn how to use the features of Cloud Control to manage, monitor, and administer your data center.

Benefits: You learn to

- Navigate and monitor the overall health of your Cloud Control system.
- Organize targets and groups.
- Setup targets monitoring, alerts and notifications.
- Use the job system to create and manage jobs to automate commonly performed tasks.
- View, search and compare configurations.
- Manage targets patching.
- Explain compliance policies and evaluate policy violations.
- Use BI Publisher to generate custom reports.

Target audience :

- Database Administrators
- System Administrator
