Informacje o szkoleniu

About this course

In this course you will learn how Microsoft Exchange Server provides access to user mailboxes for many different clients. Because all messaging clients access Exchange Server mailboxes through client access services, we will examine how to plan, configure, and manage client access services in Exchange Server. Since using smartphones and tablets for messaging has become very popular, and because many smartphone users use their devices intensively for email, calendar, tasks, and other collaboration purposes, you will also learn how to manage mobile devices. This course also describes planning and configuring message transport in an Exchange Server organization. You will learn how to plan, configure and manage transport services to provide efficient communication between your Exchange Servers, Exchange Online, and other mail servers on the Internet. Finally, you will learn how to troubleshoot transport services when issues occur in different scenarios so that you can provide your organization with a healthy and reliable messaging infrastructure.

Czego się nauczysz

At course completion

After completing this course, students will be able to:

Implement Client Access Services

Manage Client Devices

Configure Outlook on the Web

Troubleshoot Client Access

Configure Mobile Device Mailbox Policies

Manage Mobile Device Mailbox Policies

Configure Message Transport

Manage Transport Rules

Manage Mail Flow

Troubleshoot Mail Flow

Troubleshoot Transport Issues

Troubleshoot with Logs

Do kogo skierowane jest to szkolenie

Audience profile

The Messaging Administrator deploys, configures, manages, and troubleshoots recipients, permissions, mail protection, mail flow, and public folders in both on-premises and cloud enterprise environments. Responsibilities include managing message hygiene, messaging infrastructure, and hybrid configuration and migration. The Messaging Administrator also implements and manages disaster recovery, high availability, and client access. To implement a secure hybrid topology that meets the business needs of a modern organization, the Messaging Administrator must collaborate with the Security Administrator and Microsoft 365 Enterprise Administrator. The Messaging Administrator should have a working knowledge of authentication types, licensing, and integration with Microsoft 365 applications.

Wymagania wstępne

Proficient understanding of DNS.

Basic understanding of messaging within Exchange Server or Exchange Online.

Basic understanding of Active Directory and domain controller infrastructure along with identity management.

Basic functional experience with Microsoft 365 services and directory synchronization.

At least 5 years of general IT experience.
